(54) Title: ENGINE FOR GENERATING MECHANICAL ENERGY

(57) Abstract: This invention relates to the production of engines based on a new physical principle in which the engines will extremely quickly change the physical state of fluids or solids, especially the substances with low boiling points such as liquid water, liquid nitrogen, CO<sub>2</sub> powder, in which the outputted mechanical energy is significantly greater than the inputted energy to operate the engine. The engine is called engine for dispersing matter into the surrounding space in order to produce mechanical energy, or in short, matter-dispersing engine.
